Seminar Report

Presenter: Sedat AKEL
Company: CyberSoft
Presentation date:28.12.2018

Short summary of the talk:
First of all, the speaker introduced his company. Speaker explained the areas in which they worked such as financial and insurance projects. Secondly, he talked about the awards and certificates they received. Finally, he answered the questions asked such as business criteria and area selection.

What have you learned?
I learned that there is a lot of work to be done in engineering but there are no people to work although there are a lot of graduates. The reason for this situation is that the information learned from the school is not sufficient, the student can not develop itself sufficiently, unable to grow in appropriate conditions.

Which parts of the presentation were particularly important/useful?
I think the most important part of the questions is answered questions. Also talking about the company of introduction has allowed me to recognize the business opportunities in my department.

Comment on the talk, the presenter, the company, and their projects.
It made me happy that the speaker said that they had hired inexperienced people unlike other companies.
