Seminar Report

Presenter: Mustafa ÖZLÜ
Company: Savunma Sanayi Başkanlığı
Presentation date:19.10.2018

Short summary of the talk:
The presenter talked about places where he studied and worked, his projects(android application) and his skills(programming language).Also he told about the professions of the future(space tourism guide)and the transformation of the software(10-year periods).In addition, he mentioned the definition of Computer Engineering and what they did.

What have you learned?
First, computer engineering has many fields of study and the change in this sector is very fast.So,we must follow the change and attempt. Second,the software is of great importance for today's world and the future.Third, participation in communities or clubs while studying at university is important both professionally and socially.

Which parts of the presentation were particularly important/useful?
I think the most important part was the talks about the future. Because I got an idea about what to do when I graduate or what I have to do.

Comment on the talk, the presenter, the company, and their projects.
It was instructive for me to listen to a conversation of a person who had carried out many projects and participated in many communities.
